AZAM AZRI AHMAD

Indonesia

SUMMARY

Web Developer with strong hands-on experience building real-world, production-ready systems using Lovable and other AI-powered no-code / low-code platforms. Specialized in designing and integrating RESTful APIs, automating business workflows, handling structured data and edge cases, and building reliable systems that prioritize clarity, performance, and trust. Experienced in leveraging AI MCP tools, external AI services, and modern backend technologies to deliver scalable and maintainable solutions for real business use cases.

PROJECT

FindScent – Conversational Perfume Recommendation System
Lovable | Conversational AI | Recommendation Logic

- Built a conversational chatbot that recommends perfumes based on user preferences
- Implemented structured data handling and recommendation logic
- Integrated AI-powered conversational flows using MCP-based orchestration
- Ensured clarity, accuracy, and trust in user-facing recommendations

Link: https://findscent.lovable.app

VisionFit – AI Frame Generator with Facial Analysis
Lovable | AI Vision Integration | Backend Logic

- Developed backend logic for AI-based facial analysis and frame generation
- Integrated external AI services and processed AI outputs into application workflows
- Implemented validation and edge-case handling for image-based inputs
- Focused on performance and reliable AI result delivery

Link: https://visionfit.lovable.app

Skin Analyzer Magic – Skincare Recommendation Platform
Lovable | AI Analysis | Data-Driven Recommendations

- Built an AI-powered skincare recommendation system using structured user inputs
- Designed backend workflows for analysis, classification, and personalized output
- Leveraged AI MCP tools to orchestrate recommendation logic
- Ensured scalability and maintainability of recommendation pipelines

Link: https://skin-analyzer-magic.lovable.app

Eleven Five Roots – Company Profile & Shop Platform
Lovable | E-commerce Logic | API Integration

- Developed a company profile website with integrated shop functionality
- Implemented backend logic for product data, transactions, and user flows
- Focused on clarity, reliability, and real customer interaction

Link: https://elevenfiveroots.lovable.app

Couple Sparkle Project – Event Landing Page & CTA System
Lovable | Conversion Logic | Automation

- Built an event landing page with strong CTA and conversion-focused flows
- Automated form handling and user data processing
- Optimized backend logic for simplicity and reliability

Link: https://couple-sparkle-project.lovable.app

EDUCATION

Master of Information Technology (Expected)
Gadjah Mada University — 2025–2026

Bachelor of Informatics Engineering
Ahmad Dahlan University — 2020–2024
GPA: 3.82

SKILLS & OTHERS

Back-End & System Design
- RESTful API Design & Integration
- Business Logic & Workflow Automation
- Data Validation, Error Handling & Edge Cases
- Performance, Reliability & Security Optimization
- PDF & Document Generation Systems

No-Code / Low-Code & AI-Powered Builders
- Lovable
- AI-powered no-code app builders (production usage)
- Backend orchestration using visual workflows
- API-first architecture within no-code environments

AI & MCP Tools
- AI MCP (Model Context Protocol) tools integration : codex, claude code, warp, droid, antigravity.
- AI orchestration & prompt-based logic flows
- Conversational AI systems
- AI-based analysis & recommendation pipelines
- External AI API integration (vision, text, recommendation)

Programming & Databases
- Python
- JavaScript
- PHP
- SQLite, Postgree
- Realm Database
- Supabase

Tools & Workflow
- Git & GitHub
- API Testing & Debugging
- Agile / Iterative Development
- Documentation & System Clarity

AVAILABILITY

- Available for long-term, ongoing collaboration
- 30+ hours per week
- Flexible working hours (remote-friendly)
