(+62) 821-3407-4063 azamazrri@gmail.com

SUMMARY

AI-Driven Learning & Data Analyst with a Master's background in Information Technology and hands-on experience analyzing learner behavior, designing AI-assisted interventions, and translating performance data into actionable improvements. Experienced in applying LLMs, learning science principles, and data analysis to identify learning blockers, personalize learning flows, and improve mastery outcomes. Strong in combining analytical rigor with human-centered coaching and real-time problem solving in AI-powered educational systems.

PROJECT

StockMinder — AI-Assisted Decision & Learning System

Case Study Project

- Analyzed time-series behavioral data to identify recurring decision errors and performance inefficiencies
- Built interpretable forecasting logic (ARIMA) to support explainable AI-driven recommendations
- Translated raw data insights into clear, actionable guidance that reduced cognitive load for end users
- Produced structured reports enabling rapid intervention and system improvement

HaiTeman — Mental Health AI Learning System

Health-Tech Case Study

- Analyzed user emotional patterns to identify psychological and cognitive blockers affecting engagement and comprehension
- Designed emotion classification for Indonesian text to distinguish conceptual misunderstanding vs emotional distress
- Evaluated LLM-based response strategies to deliver adaptive, supportive, and context-aware feedback
- Translated behavioral data into actionable insights for improving interaction flow and learner confidence
- Applied ACT principles to guide users toward value-based actions and sustained engagement

GIB Shortest Route — Optimization & Decision Support

Optimization Case Study

- Modeled decision-making processes as structured systems to reduce error-prone manual reasoning
- Evaluated algorithm trade-offs based on clarity, efficiency, and user interpretability
- Designed decision-support flows to guide users toward optimal outcomes with minimal friction

FindScent — Conversational Recommendation System
Domain Spesific Case Study

- Designed structured conversational workflows to diagnose user preferences and reduce decision ambiguity
- Applied semantic matching and rule-based logic to distinguish signal vs noise in user inputs
- Integrated LLM-based explanations to improve user understanding and trust in recommendations

EDUCATION

Gadjah Mada University – (2025 - 2026 (Expected Finished))
Master of Information Technology
Ahmad Dahlan University – (2020 - 2024)
B.Sc. Informatics Engineering — GPA 3.82

SKILLS & OTHERS

AI & Data

- Python (data analysis, prototyping)
- LLM prompting & evaluation
- Learning data analysis
- Time-series & pattern analysis
- Workflow & AI automation concepts

Tools

- Google Sheets
- Power BI
- Jupyter Notebook
- VS Code

Languages

- Indonesian (Native)
- English (Professional working proficiency)
