Jumlah questions: 25
Estimasi pengerjaan: 25menit
Nama instruktur: Asmarini Asmarini

1. What is identified as a primary cognitive skill that sets humans apart from other creatures?

   a) Thinking
   b) Problem-solving
   c) Communication
   d) Memory

2. A company is struggling to attract new customers in a highly competitive market. Instead of following traditional marketing strategies like advertisements or discounts, the team decides to launch an interactive augmented reality (AR) experience, where customers can engage with the brand in a fun and immersive way.
   Which **type of thinking** is most clearly demonstrated in this approach?

   a) Analytical Thinking
   b) Convergent Thinking
   c) Critical Thinking
   d) Creative Thinking

3. All of the following are types of thinking **EXCEPT....**

   a) Critical Thinking
   b) Analytical Thinking
   c) Abstract Thinking
   d) Emotional Thinking

4. What is the primary characteristic of Analytical Thinking?

   a) Generating innovative ideas by relying on unconventional and spontaneous thinking rather than logical decomposition.
   b) Generating multiple creative ideas without following a structured process.
   c) Utilizing pattern recognition and instinct to formulate conclusions without the need for structured evaluation.
   d) Examining and breaking down ideas or solutions into smaller components using logic and evidence

5. Which of the following scenarios best represents the thinking style of an abstract thinker?

a) A philosopher who connects ancient myths, modern psychology, and cultural trends to explain human behavior in a new way.

b) A scientist who meticulously follows a step-by-step procedure to test a hypothesis without considering broader implications.

c) A mathematician who solves a problem by applying a specific formula without considering alternative approaches.

d) A technician who fixes a machine by identifying and replacing a broken component based on a manual's troubleshooting guide.

6. Why is it important to study various types of thinking?

a) It ensures that individuals rely only on logical reasoning and avoid creative approaches

b) It helps individuals choose the most effective way to process information, solve problems, and make decisions in different situations.

c) It simplifies problem-solving by eliminating the need to analyze different perspectives

d) It limits decision-making by enforcing a single thinking strategy for all situations.

7. Which standard of critical thinking is compromised if an argument lacks multiple viewpoints?

a) Precision

b) Clarity

c) Accuracy

d) Breadth

8. All of the following are standards of critical thinking **EXCEPT**...

a) Creativity

b) Relevance

c) Accuracy

d) Clarity

9. A teacher is grading student essays and ensures that each argument is supported by factual evidence, the ideas are logically structured, and there are no factual inaccuracies. However, the teacher fails to check whether the essays address the assigned topic.
Which standard of critical thinking is being violated?

a) Precision

b) Relevance

c) Accuracy

d) Fairness

10. If critical thinking is essential, why do many people struggle with it?

a) Because intelligence alone guarantees strong critical thinking abilities.

b) Because people do not need critical thinking to make decisions in life.

c) Because critical thinking is an instinctive skill that everyone naturally possesses.

d) Because uncritical thinking is common, even among highly educated individuals.

11. In which of the following areas does critical thinking help in developing and defending well-supported arguments and beliefs?

a) Workplace

b) Social interactions

c) Daily life

d) Academic performance

12. Which of the following represents a barrier to critical thinking where a person believes something is true simply because they wish it to be true, rather than based on evidence?

a) Unwarranted Assumptions

b) Sociocentrism

c) Egocentrism

d) Wishful Thinking

13. Which of the following best defines a **problem**?

a) A task that has only one correct answer and does not require critical thinking.

b) A situation where there is a gap between the current state and a desired outcome, requiring a

c) A process of implementing solutions without identifying the actual issue.

d) A challenge that cannot be resolved under any circumstances.

14. A student struggles to complete their homework because they do not understand the lesson. They decide to ask their teacher for clarification and review their notes to improve their understanding.
What is the **problem** in this situation?

a) The student asks the teacher for help.

b) The student does not understand the lesson

c) The teacher gives more assignments.

d) The student completes their homework.

15. Which of the following is the **first step** in the problem-solving loop?

a) Explore information and create ideas
b) Evaluate the results
c) Build and test the idea
d) Identify the problem

16. The **first step** in the problem-solving loop is **identifying the problem**, as it defines what needs to be solved before exploring possible solutions.

a) True
b) False

17. Building and testing an idea should be done **after** selecting the best idea in the problem-solving loop.

a) False
b) True

18. Which step in the problem-solving process involves assessing potential solutions and weighing their pros and cons?

a) Identifying the Problem
b) Implementing the Solution
c) Evaluating Solutions
d) Choosing a Solution

19. Choosing a solution should be done **before** evaluating potential solutions in the problem-solving process.

a) True
b) False

20. A student is struggling to understand a math concept. First, they gather information by reviewing their textbook and watching online tutorials. Then, they try different problem-solving techniques to find the best approach before selecting the one that works best for them.
The student followed the **correct order of the problem-solving process**?

a) True
b) False

21. What is the purpose of using the **"is/is not diagram"** in problem clarification?

a) To automatically find a solution without analyzing the problem.
b) To assume that poor academic performance is the only cause of longer study periods.
c) To focus on the true nature of the problem by eliminating assumptions and irrelevant details.
d) To ignore important details and focus only on what is visible.

22. The **"is/is not diagram"** helps in clarifying the problem by eliminating assumptions and irrelevant details.

a) True
b) False

23. Which method is commonly used in Six Sigma for process improvement?

a) TRIZ
b) PDCA
c) DMAIC
d) 5 Whys

24. Which method focuses on solving problems through innovative and inventive solutions?

a) PDCA
b) TRIZ
c) DMAIC
d) Root Cause Analysis

25. A restaurant notices that customer wait times are too long. The manager collects data on average waiting times, analyzes peak hours, identifies staff shortages as the root cause, hires additional employees, and sets up a system to monitor future wait times.
Which problem-solving method best fits this approach?

a) DMAIC
b) TRIZ (Theory of Inventive Problem Solving)
